

# MyCollegeCompass

Year & Branch: 3<sup>rd</sup> Year CSIT

Section: A

## Abstract

Entrance exams for college in India such as JEE and EAMCET are some of the most competitive exams a student can take. Every year, it feels like the competition is only getting tougher, but it is not known for sure. However, the more tougher job is to select a proper department from a proper college our rank can fetch. Our project aims at helping the students by providing the college that they have the chance of getting into.

This is the solution provided by the "MyCollegeCompass" application, which analyzes the past three years' cutoff ranks based on each college and narrowing it down to the department also.

It is an android application implemented using Flutter and Android Studio, as well as Machine Learning models to harvest and properly analyze the data.

The main objective of this project is to give the specific department in a specific college that the user wants to know.
